

QUICKapp - VERSAstream™ (VS1028)

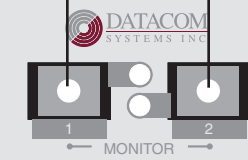

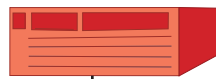

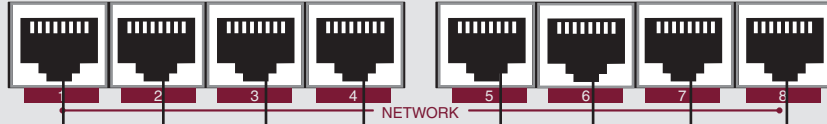

Deploy the VERSAstream to gain complete visibility into your SPAN and In-Line environments. Multi-segment aggregation means less deployment and maintenance costs.

2
POWER

1

A packet enters the network through the router. The VERSAstream passes an exact copy to the connected devices.

2

The VERSAstream can also simultaneously provide visibility into the internal network. Viewing packets on both sides of a firewall allows security rules to be easily verified.

4

Through proper use of a monitoring or analysis device, a packet can be viewed at all points across the network over time. Gain valuable insight into how your data is affected as it goes through routers, firewalls, switches, and eventually gets to its destination. Utilize this valuable information to optimize your network and streamline problem resolution.
